

CompassOne Standard

CompassOne Standard builds on the foundational security in CompassOne Essentials with proactive capabilities, such as vulnerability management, cloud posture, and application control. It supports additional integrations for greater unified visibility and a streamlined SIEM capability for compliance. Standard is the security platform MSPs rely on to grow their business, meet advanced security and compliance needs, and deliver measurable value to clients.

Whether you're managing complex environments or scaling your services, CompassOne Standard improves the security posture of both your organization and your clients, moves organizations from reactive to proactive maturity, and unlocks growth opportunities for your business.

Key Benefits for Your Business

Consolidate multiple tools to simplify operations and reduce cost

Get complete, real-time visibility of your attack surface and exposures

Measure cyber risk and show meaningful progress improvements

Achieve 24/7 protection across cloud, identities, and endpoints with AI-enhanced, human-led MDR

Ensure consistent, continuous protection with global policy management

Integrate existing technologies, like Microsoft, Google, firewalls, vuln. scanners, and more

Leverage reactive security findings to inform proactive security operations

Shrink attack surface with integrated, prioritized vulnerability management

Automatically stop endpoint threats without management overhead

Proactively protect your cloud identities and access with cloud posture

Satisfy logging, insurance, and compliance needs without complexity or cost

Unlock tier volume discounts as you scale your business

CompassOne Standard Includes:

Security Posture Rating

Improve your security posture through continuous assessment and guided actions

Vulnerability Management

Optimize vulnerability management by proactively detecting and remediating risks with prioritized guidance

Asset Inventory

Achieve complete asset visibility across your attack surface

Cloud Posture

Manage and enforce security policies globally for M365

Tenant Administrator

Easily manage multiple tenants with a unified view

Application Control

Automatically stop unwanted or risky applications

24/7 Security Operations Center (SOC) with Active Response

Neutralize threats using Blackpoint's expert, human-led SOC

Streamlined SIEM (Logging & Compliance)

Satisfy compliance and regulatory requirements without legacy SIEM complexity

Managed Detection and Response (MDR) w/ Blackpoint EDR Agent

Protect your devices 24/7 with patented, native AI-enriched tech.

Standard Endpoint Security Integrations

Turn existing endpoint security into 24/7 Managed EDR

Cloud Identity Detection and Response

Protect your cloud identities 24/7 with native AI-enriched technology

Standard Cloud Security Integrations

Microsoft 365, Google Workspace, Cisco Duo, Azure SSO

Windows Defender Management

Get centralized, global management for Defender

Firewall and Vulnerability Scanner Integrations

Integrate network security logs and vulnerability scanner results to enhance asset visibility, context, and risk management

Where CompassOne Standard Wins

CompassOne Standard

Unified Platform with Contextual Protection

Delivers protection in a single platform. This unified approach gives your team better attack surface visibility and empowers Blackpoint's SOC to respond faster with connected context.

Security You Can Measure

Provides a Security Posture Rating that allows you to assess, monitor, and track improvements over time, tying technical efforts to business outcomes and helping you demonstrate ongoing value to clients.

Identity Protection is Essential

Includes 24/7 identity detection and response to secure your most targeted asset: user identity. We stop credential theft, account takeover, and business email compromise

Fewer Tools, Simple Management

Has unified security capabilities, reducing the need for MSPs to stitch together multiple products and dashboards – Giving you time back to focus on growing your business.

Real-Time Human Response

Actively responds to threats 24/7 via the Blackpoint SOC, isolating endpoints, disabling accounts, terminating processes, and initiating remediation – all on your behalf. The result: less manual effort for MSPs and faster threat resolution.

Vulnerability and Risk Reduction

Provides built-in vulnerability, cloud posture, and application management, helping MSPs proactively close gaps that attackers exploit. Prioritized, contextual guidance ensures teams focus on what matters most for each client environment.

Built for Compliance and Insurance Needs

Offers log collection, dashboards, and reporting to support compliance, insurability, and regulatory needs. Helps MSPs and their clients meet HIPAA, NIST, CMMC, CIS, and PCI-DSS requirements without the cost and complexity of legacy SIEMs.

Other Solutions

Tools That Don't Integrate

Other providers offer point solutions or require integrations to offer the breadth of protection that CompassOne delivers. You get disjoint security operations, increased costs, and gaps in security.

No Proof of Return On Investment

Most providers don't provide benchmarks, leaving you unsure if your cybersecurity is truly effective. When it's time to show ROI, you're pulling separate reports together trying to demonstrate how your clients' money led to real outcomes.

Identity Remains Vulnerable

Other solutions focus heavily on malware or don't look at identities in the context of the overall environment. These solutions struggle to immediately detect and stop where most attacks begin: compromised identity.

Point Solutions Slowing you Down

Each point solution vendor adds a layer of complexity: from contracts and billing to management and support. Juggling multiple tools drains your team's time and margins that could be used to grow your business.

Alerts Your Need to Manage

Other solutions just provide alerts or require you to grant approval for response. You and your team are now stuck doing the operations you hoped to delegate.

Gaps Prone to Exploit

Point solutions provide a narrow view of your risk, reporting just what they detect. Trying to identify unknown gaps and prioritize what to fix first using disjoint tools leads to delayed or ineffective remediation and increased risk of attack.

Deciding Between Compliance or Security

Organizations often pay for compliance or security but rarely get both in a unified, cost-effective solution. MSPs are often forced to pick one or the other, compromising either on compliance or 24/7 protection.
